

Habitat and Kubernetes: Three Tiers of Service Deployment

LEGEND

 Data Flow

 Habitat Software

 Habitat Software (Optional)

Tier One

Habitat deploys and manages services that run the services that make up Kubernetes.

Tier Two

Habitat deploys and manages services that run on Kubernetes.

Tier Three

Habitat deploys and manages external services that serve applications on Kubernetes.

You can use Habitat to run the components of your on-prem Kubernetes cluster, or you could use another mechanism or cloud or hosted Kubernetes services.
